MODE OPÉRATOIRE

Codification : M-AN -41

Version : B

Date : 28/10/2005

1 / 2

**MODE OPERATOIRE D'ANALYSE POUR LA CONFIRMATION DE L'ORIGINE DES
METABOLITES DE LA TESTOSTERONE PAR CPG/C/SMRI****COLONNE**

Type: DB17-MS JW Scien 122.4732
 Longueur: 30m
 Diamètre interne: 0.25mm
 Epaisseur du film: 0.25 μ m

ASSURANCE QUALITÉ
LNDD**INJECTION**

Mode: Splitless (insert splitless)
 Température injecteur: 280°C
 Volume injecté: 1 μ l-4 μ l
 Solvants de rinçage ALS:

APPLICABLE le

28 OCT. 2005

CONDITIONS GC

Température initiale: 70°C pendant 1 min
 Gradient de température: 70->271°C à 30°C/min
 271°C->281°C à 0.6°C/min
 281°C pendant 3 min
 281->300°C à 5°C/min
 300°C pendant 5 min
 Temps d'analyse: 45 min
 Pression constante: Ajuster le SI à environ 870s

SPECIMEN

INTERFACE

Piège à eau: -100°C
 Ligne de transfert: 350°C
 Four à combustion: 850°C

CONDITIONS SM

Mode d'acquisition: ions 44, 45 et 46
 Programmation de l'acquisition: Temps d'acquisition total: 2580s

Seuil de positivité de l'AMA: $\delta^{13}\text{C}$ ‰(métabolite) - $\delta^{13}\text{C}$ ‰(composé endogène de référence) > 3‰
 $\delta^{13}\text{C}$ du composé < -28‰

Variation maximale admissible liée à la méthode: +/- 0,8‰

Conclusion

L'analyse par spectrométrie de masse de rapport isotopique indique une origine exogène des métabolites de la testostérone, cohérente avec une prise de testostérone ou de l'un de ses précurseurs.

L'origine exogène des métabolites de la testostérone a été objectivée sur la base d'un appauvrissement isotopique de 3.51‰ et -6.39‰ respectivement pour les métabolites androstérone et 5 α androstanediol.

RAPPORT DE CONTRE ANALYSE

Demandes de contre-analyse de l'UCI et de l'USADA du 31 juillet 2006 suite au rapport d'analyse n°178/07-1

Prélèvements du Dr. BORDABERRY

Organisme : Cyclisme (UCI)
Épreuve et lieu : TDF 2006 : 17^{ème} étape à MORZINE
Date : 20/07/2006

Réception de(s) l'échantillon(s) d'urine :

Date : 20/07/2006
Type de matériel : Berlinger
Nombre d'échantillon(s) : 1 (sur 3 échantillons reçus)
Référence de(s) l'échantillon(s) : 178/07_995474 B

Résultats (Cf référentiels en vigueur : AMA / Réglementation nationale – contrôle en Compétition)

Date de début des analyses : 03/08/2006

Méthodes utilisées : Chromatographie gazeuse couplée à la spectrométrie de masse GC/MS (EC24D) et
Spectrométrie de masse de rapport isotopique GC/C/IRMS (EC31)

Conclusions : ($pH = 5.2$ $d = 1.025 \pm 0.002$)

T/E estimé à 11.0 (variation maximale admissible = 30%)

Concentration de Testostérone estimée après correction par la densité à 45.7 ng/mL
(Variation maximale admissible = 20 %)

Concentration d'Epitestostérone estimée après correction par la densité à 4.2 ng/mL
(Variation maximale admissible = 30 %)

Rapport supérieur au seuil de 4

* Hors portée de l'accréditation COFRAC.

RAPPORT DE CONTRE ANALYSE (SUITE)

Conclusions (Suite) :

L'analyse complémentaire par spectrométrie de masse de rapport isotopique indique une origine exogène des métabolites de la Testostérone, cohérente avec une prise de Testostérone ou de l'un de ses précurseurs.

L'origine exogène des métabolites de la Testostérone a été objectivée sur la base d'un appauvrissement isotopique de 6.4 ‰ et 3.5 ‰, respectivement pour les métabolites 5α-Androstanediol et Androstérone.

Résultat exprimé par rapport au seuil de positivité de l'AMA :

- Appauvrissement isotopique > à 3 ‰ (*variation maximale admissible appliquée au laboratoire = 0.8‰*)

USADA 0367

B-sample analysis 995474

Fifth of August 2006

Chatenay-Malabry

Statement no. 1

As an expert Dr. Douwe de Boer has been witnessing in the period between August 3 and August 5, 2006, the B-sample analysis in the LNDD, the WADA- accredited anti-doping laboratory in Chatenay-Malabry.

Statement no. 2

The impression of the expert regarding the analytical performance of the B-sample analysis was that the LNDD worked in a transparent and professional way and according to transparent and professional procedures.

Statement no. 3

In respect to the semi-quantitation of the ratio between testosterone and epitestosterone (T/E ratio) as well as of the concentration of testosterone and epitestosterone it must be stated the following:

- A) A ratio was established between two peaks in the chromatogram.
- B) The identity of the compound(s) belonging to the peaks has not been established according to the minimal WADA requirements.

Therefore, any official conclusion regarding to the T/E ratio as well as of the concentration of testosterone and epitestosterone is and will be premature. As such any official conclusion in relation to the above mentioned parameters of the respective sample is non-conclusive.

Statement no. 4

In respect to the GC/C/IRMS analysis it must be stated the following:

- A) During the B-sample analysis it was not possible to see documentation and data regarding the uncertainty of the GC/C/IRMS analysis, which was reported to be 0.8%.
- B) During the B-sample analysis it was not possible to see documentation and data regarding the historical data of blank urine pool no. 4.

Therefore, it was for the expert not possible to give an adequate evaluation of GC/C/IRMS analysis of the respective sample. The above mentioned issues have been implemented into a list of requests addressed to Prof. de Ceaurriz.

Dr Douwe de Boer

List of the requests from Dr. Douwe de Boer
Counter-analysis on "B" 995474

- The GC/C/IRMS has been accredited by the WADA and the French National Accreditation body.

Would it be possible to see the documentation regarding this accreditation?
If so, I would appreciate to see the documentation regarding the accreditation.

- In principle a WADA accredited laboratory is participating in proficiency programs.

Would it be possible to see data of the Châtenay-Malabry laboratory?
If so, I would appreciate to see the data regarding the GC/C/IRMS analysis.

- The certificate of the analysis of the A-sample mentions an "uncertainty" of 0,8% for the GC/C/IRMS result.

Would it be possible to see documentation and data of how this value of "uncertainty" was established?

If so, I would appreciate to see documents and data regarding the establishment of the value of 0,8%.

- Historical data regarding the blank urine pool no.4, which has been used in the GC/C/IRMS procedure.

Would it be possible to see documentation and data regarding the history of blank urine pool no.4.

If so, I would appreciate to see the repeatability (intra-day variation) and the reproducibility (inter-day variation), meaning the average value, the standard deviation and the number of observations made.

Dr. Douwe de Boer
